Precision Layout with Guides & Frames

Assignment ::

In the assignment we will practice using InDesign's precision tools and features to match the provided layouts. On each page of the exercise InDesign document, there are either **written directions** on what steps to take, or a **faded outline** of what the final arrangement of the page elements should look like.

Using the skills learned in class, re-create the arrangement so it looks exactly like the example in the background, both visually and mathematically. If objects are provided, only use those objects to create the arrangement.

Be sure to read the **Key Skills** listed at the top of each page for hints and instructions on how to accomplish the tasks. In addition, it can be helpful to have the full quality of the images displayed for more precise reference. To enable high-quality images, select View > Display Performance > High Quality Display.

Requirements ::

Rename your InDesign file `lastname_firstname_04.indd`, placing your name in the filename. Save your file frequently. When done, copy that file to your shared Drop Box on Google Drive for this class. You do not need to turn in any other files.

This lab exercise is due by the end of class.
